

# Feb 8 and Feb 9 Combined Meeting Minutes, 2025 | CSC 442 Team Project Meeting

## Attendees

- Anthony Brown
- Nikhil Vasudeva

## Notes

- The team reviewed the pairs of datasets considered for the project.
- The team reviewed a list of potential datasets prepared prior to the meeting.
- The datasets for consideration covered the following topics:
  - Air Pollution and Life Expectancy
  - Global Availability and Prevalence of Use of Assistive Products
  - Depression Survey Data and Employee Attrition Data
  - Food Production and Agriculture Sustainability
  - Netflix film data and iMDB scores
- Each presented dataset already contains missing values
- The employee attrition data has many columns (28) so it would be difficult to merge it with another data and remain under 30 columns
- The food production dataset has many rows because variables are added as rows from the source and includes temporal data so it would be difficult to sample from
- The team agreed to rank the presented dataset pairs in the following order
  - Netflix film data and IMDb scores
  - Air Pollution and Life Expectancy
  - Depression Survey Data and Employee Attrition Data
- The rest of the dataset pairs were not ranked but can be used as backup options if the initial selections are not approved.

## Action items

Task	Deadline	Person Responsible	Comments
Become familiar with the ranked	February 12, 2025	All team members	

datasets			
Prepare to present the Netflix film data and IMDb scores data during the dataset review session	February 12, 2025	All team members
